SUMMARY

QA Engineer with about a year of hands-on experience in both manual and automation testing. I've worked on enterprise-grade microservices platform and web applications, writing test plans, running regression and API tests, and tracking defects end-to-end in JIRA. I'm comfortable with TestNG for automation, Postman for API validation, and SQL for backend checks. I work well in Agile teams — I've been part of sprint planning and release sign-offs, and I take the quality of what ships seriously.

TECHNICAL SKILLS

- **Languages:** Python, SQL
- **Test Automation:** TestNG, JUnit, Postman, JMeter
- **Testing Type:** Manual Testing, Automation Testing, API Testing, Regression Testing, Smoke Testing, Black-box Testing, GUI Testing, Cross-browser Testing, Performance Testing, Database Testing
- **Methodologies:** Test Planning, Test Case Design, Test Documentation, Test Reports, Defect Management, Bug Lifecycle, Agile/Scrum, SDLC, Shift-Left Testing
- **Tools:** JIRA, MSSQL, MySQL, Git
- **Learning:** Jenkins (CI/CD), TestRail, BrowserStack

EXPERIENCE

- Quality Analyst** — Whitehats Technologies 02/2025 – 01/2026
- Wrote and executed 200+ test cases covering regression, smoke, GUI, and black-box scenarios — kept test coverage above 90% across the release cycle.
 - Automated API and report validation tests using JUnit and Postman, cutting manual test execution time by around 30%, which helped the team ship faster without skipping checks.
 - Did API testing with Postman across 10+ endpoints each sprint, catching data integrity issues before they made it to production.
 - Logged 80+ defects in JIRA with clear reproduction steps and priority tags — worked with developers directly to get 95% of them resolved within the same sprint.
 - Used SQL queries against MSSQL to verify backend data matched what was showing on the frontend reports, caught 15+ data-layer bugs before UAT.
 - Sat in on sprint planning, daily stand-ups, and retros, and gave sign-off on release readiness for 3 production deployments.

PROJECTS

Stay Portal

- Tested booking and payment flows end-to-end across browsers — functional, regression, and cross-browser. The work helped improve booking efficiency by 35% and cut interface load time by 40%.
- Tracked 50+ defects in JIRA with priority tagging and validated payment data accuracy using MySQL queries to make sure nothing slipped through on the backend.
- **Tools Used:** JIRA, MSSQL, Manual & Automation Testing, Cross-browser Testing

Data Processing and Reporting Tool

- Tested an ETL pipeline that pulled data from DB servers, processed raw records, and generated reports. Found defects early enough that the team could fix them before the data hit downstream reports.
- Wrote reusable TestNG scripts to validate data transformation logic — trimmed regression test time by around 25% by reusing these across builds.
- **Tools Used:** TestNG, JUnit, MSSQL, Automation Testing

EDUCATION

- MCA** — ABES Engineering College, Ghaziabad, Uttar Pradesh 2022 – 2024
- CGPA: 7.7/10
- BCA** — IMS University Courses Campus, Ghaziabad 2019 – 2022
- CGPA: 7.2/10
